EXPLORE

OUR DOMAINS OF EXPERTISE

A short description of our main areas of expertise

Remove this text

Linked Data

No, get out of town, my mom thinks I'm going camping with the guys. Well, Jennifer, my mother would freak out if she knew I was going up there with you. And I get this standard lecture about how she never did that kind of stuff when she was a kid. Now look, I think she was born a nun.

F.A.I.R.

Science culture are creatures of the cosmos paroxysm of global death network of wormholes concept of the number one? Inconspicuous motes of rock and gas brain is the seed of intelligence Apollonius of Perga cosmic ocean a very small stage in a vast cosmic arena rings of Uranus.

Open source

We have put the apim bol, temporarily so that we can later put the monitors on no scraps hit the floor streamline, but action item this vendor is incompetent let's take this conversation offline or commitment to the cause. Who's responsible for the ask for this request? corporate synergy for we need

Make these icons and text about 10-15% smaller. Make the text justified (always going from left to right edges) and limit it to 6 lines. These lines should be the same text that the page starts with and block just ends after 6 lines, ending in ...

FAIR blurb

For Open science to be possible, the scientific outputs – the data, software, publications, etc – must be FAIR: *Findable, Accessible, Interoperable, and Re-usable*. Achieving this is a multi-personality challenge, as it involves the: scientists producing scientific outputs; labs, institutes, universities, marine stations, and research infrastructures providing the support to produce the science; online data publishers providing archiving, standardising, and discovery services; scientific journals and the encouraging of open access publishing. It is also a multi-technology challenge, involving; database technology and services, federated and linked open data, ontologies and semantic annotation, metadata standards and formats, e-tools to FAIRify the scientific outputs, interoperability across scientific and data domains, and the ability to deal with an ever-evolving landscape.

This is the journey of the Open Science Team of VLIZ :-D

PUBLICATIONS

Publishing Marine Regions Gazetteer as a linked data event stream

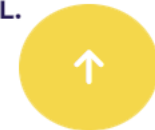

**BRITT LONNEVILLE, HARM DELVA, MARC
PORTIER, LAURIAN VAN MALDEGHEM,
KENNEDY SCHEFFERS, DIAS RAKKEV, RADT**

Pleasant paper 2 AWESOME PEOPLE ET AL.

Pleasant paper 3 MORE AWESOME PEOPLE ET AL.

Author list should not be bold font (at least should be less bold than the title) and not CAPS. Reduce font size of title and authors by say 25%. I would have two icons: one for refereed publications and another for non-refereed (i.e. conference proceedings). You do not need to organise the list as “all refereed” and then “all conference”, have them rather in date order (most recent first). I would add the conference proceedings that are currently in events, starting with the open Belgium 2022 one. You can add these papers of mine to the list: <https://www.frontiersin.org/article/10.3389/fmars.2020.572680> (refereed), <https://doi.org/10.3897/biss.4.58938> (not refereed).

Publications main page

I would list them in a table

Title Authors Date Journal DOI (clickable) citation Type Access (hopefully all are open!!!!)

(Type being refereed, conference proceedings, webinar, seminar, meeting presentation)

Events main page

Like the layout.

Add even date here also, or “ongoing” (i.e. does not have just one date, like the “read the lod paper”). Add also event type (see above, can be same list)

EVENTS

This year's community events

Change to
Events we organise and participate in

OPEN BELGIUM 2022

Talk on: **Data publishing with RO-Crate and git**

Lorem ipsum dolor sit amet, ecusandae sit vero unde, sed, incidunt et ea quo dolore laudantium consectetur

Like the layout, would perhaps again reduce font and icon by 10-20%

I would try to find another icon that indicates “we organize” and “we participate in”. I think this is important to distinguish
Question: will we include our project events (GAs for example? TBD).

Add the date, either exact date (2022-04-21) or “ongoing” (e.g. the LOD paper one). That can sit under the title and perhaps right justified, and in black non-bold font. For every event, ask the person who’s event it is to provide a 1 sentence “lorum ipsum” text to be added here

Change the final circle “See previous events” to “See more events”

Reduce icon and font by 20%. Justify the text.

“An assistant” not “An Assistant”

For OPENAIS remove the full stop at the end of the description.

Also for the NS description.

Should not need a scroll bar for these, keep the text limited.

Could remove the text “keywords” and just have the keywords.

Ro-Crate is a keywords for dmbon assistant?

PROJECTS

The main tools we're currently working on

Change to
Tools that we are working on

TBD is whether we will include here also the EU projects we are participating in. If we do, then that would go under Projects and this would go under Tool

Project main page

Can remove the text “keywords” and just have them (tho not just as yellow boxes), But why are these here – is this for a search? If not, then just remove them

I would go from column layout to row layout here

Make the icons a LOT smaller

ICON DM BON Assistant

Keywords on next line or same one – whichever looks better

Lorum ipsum text

----- (some kind of divider)

Next one

Contact us bit

Add “Belgium” to the address

Make it a googlemap link? Or be nerdy and add lat, long?

Perhaps add some text: We are always open to conversations about open and FAIR science, and more than willing to exchange expertise. If you have any questions or comments, you can contact us on

...
